With all factors taken into consideration during our 6 month trial I would like to confirm that the Northwest Independent Hospital would like to purchase Medi-Shower units and have them all implemented/installed throughout the hospital in October 2015.

Kind Regards

Lee Vickery BSc (Hons)
Sterile Services Department

Here at the Northwest Independent Hospital we take a proactive approach and are always looking to apply best practise to ensure our highest standards are kept. When trialling new products we are always happy to try something new that can improve our practises and shows that the hospital is receptive to new innovations in the scientific world.

During the presentation from the Medi-Shower representatives, the Northwest Independent Hospital agreed to trial the Medi-Shower product into one of the surgical ward rooms in February 2015. After one month of regular use water samples were taken from the shower head and independently tested for any bacterial growth of Legionella & Pseudomonas. The results came back satisfactory and no growth. Again in April 2015 samples were taken and sent away for independent testing and again the results came back satisfactory and no growth.

Over the past 7 months of trialling the Medi-Shower we have had nothing but positive feedback from Estates, the Infection control team and the Ward Sister. The results from the tested Shower head & hose clearly shows that the Medi-Shower does indeed successfully deliver the promises made in the brochure. After discussing the product in great detail we feel that the Medi-shower should be implemented throughout the hospital as it is clearly superior to our existing units and practises. The advantages we feel it brings to the hospital are:-

- The silver Ion technology incorporated in the product that is proven to reduce the risk of harmful bacteria.
- The colour-coded replaceable inserts are simple to use and would save many hours of maintenance and cleaning and combined with the quarterly control chart will improve monitoring of the cleaning process
- Cleaning the Medi-Shower is simple as harmful chemicals aren't being used during the process.
- The product is cost effective, in that it is less expensive to replace the insert than to replace the entire shower head and hose combined with the maintenance of disinfecting/descaling of the whole unit.
- Proven to minimise and control levels of harmful bacteria.
